Arboriculture: Integrated Management Of Landscape Trees, Shrubs, And Vines

Synopsis

This text is a comprehensive, analytical, and logically organized guide offering a strong scientific and technical background for training and practice in the field of arboriculture. The third edition represents a complete revision and update to reflect the latest trends in plant selection and maintenance practices and evaluate them based on the most recent research and experience. All aspects of tree, shrub and vine care are covered, including plant structure and function, plant selection, site selection and preparation, climatic influences, transplantation, water/soil/nutrient management, environmental hazards, diseases, insects, and IPM (Integrated Pest Management).

Customer Reviews

Harris wrote the first edition of this book when trees were "trimmed" by the same people who patched asphalt and repaired park benches. It was a breath of rationality in a field that relied mostly on anecdotal information. The new edition reinforces this work as the compendium of current thinking about how to care for trees. Clark and Matheny build eloquently on Harris's solid foundation. The public participates actively in caring for trees and demands to know information found in this book. Why not plant the biggest caliper tree you can find? Can't you do something about the tree roots "breaking" up my sewer? Open the book and show them the brief but definitive answer that is easily found here. I wish more citizen tree advocates would read this book. For that matter, I wish more arborists would too.

Ordered for my husband - a classic book, he loves it!

what you would expect, nice book

Great product for a great price!
